

PROBLEM SOLUTION-FIT

Deaf and dumb people who is not able to hear anything

Easy to carry
Low cost compared with existing devices
Can able to use in dark places

Can able to use in dark places.
It can able to use different sign languages.
Can able to travel in rushed area without any help.

They cannot able to share the information in dark places by sign languages in emergency situation.

A people with impaired problem share the info by sign language but in dark place it is very difficult. The people cannot how the different sign languages so it is difficult

In existing behavior the camera is used of sensing the signlanguages of people, In this invention also we use camera for sensing but it can able to sense even in night time.

It can be carried easily.because it designed like specs or eyeglasses

By using this device,the person with disability can easily communicate with others.

My solution for this problem is to use my invention it may solve many problems of the customer.

Real time is more existing.
It can able to share the voice records to 3d avatar gestures.
